ABSTRACT:

PROBLEM TO BE SOLVED: To provide a transparent soap composition which is excellent in transparency and resistance to dissolving and losing its shape, by incorporating a salt of a higher fatty acid and a combination of lower alcohols consisting of isopropanol and/or tert-butanol, ethanol and n-propanol in a specified proportion into the soap.

SOLUTION: This transparent soap composition is provided by incorporating a salt of a higher fatty acid represented by the formula wherein R is a saturated or unsaturated hydrocarbon group and M is ammonium, an alkali metal, an alkanol amine or a basic amino acid, and a combination of lower alcohols consisting of isopropyl alcohol and/or tert-butanol, ethanol and n-butanol in a proportion within a diagonally shaded area, in an amount of 10 to 25wt.% based on the weight of the transparent soap. Optionally, various surfactants, a transparentizer such as ethylene glycol and cane sugar, an emollient agent, a moisturizing agent, a germicide, a perfume, a pigment and other various functional additives can be added.
